EDUCATION

Zagazig University, Faculty of Computer and Information
Bachelor's in computer science

Sharqia, EG
May 2027

- Relevant Coursework: Machine Learning, Probability & Statistics, Discrete Mathematics, Data Visualization, Software Engineering, Design & Analysis of Experiment and Survey Methodology

VOLUNTEER EXPERIENCE

IEEE

Brand Ambassadors (CS – Talent & Tech)

Sharqia, Egypt
Aug 2025 – Oct 2025

- Rookies Period: offline sessions, problem solving contests, Many presentations.
- We learned about the process of hiring, such as recruitment and selection, writing job posts, and the interview lifecycle.
- We learned python, statistics & probability, dealing with data analysis (EDA), visualization with Matplotlib & seaborn libraries, Power bi

Zag-Eng

Ai & Data Science Tech Lead

Sharqia, Egypt
Nov 2025 – June 2026

- Plan for the season and the weakly content.
- Weekly sessions explaining the material, both online and offline, in collaboration with the co-leads.
- Guiding members and helping them solve problems and build projects.

SKILLS

- **Programming Languages:** Python, C++, Html, CSS, JS
- **Miscellaneous Technologies:** Git, Docker, Streamlit, FastApi, database (SQL, MongoDB, postgresql)
- **ML & DL Algorithms:** Regression, Classification, Clustering, Dimensionality Reduction, CNN - RNN – Transformer
- **Tools & Frameworks:** Python (e.g.: - Scikit-learn, NumPy, Pandas, Matplotlib, Plotly), Pytorch, OpenCV

Problem Solving

Codeforces, LeetCode

- Solve +650 problem @codeforces & ~400 problem @LeetCode
- Completing Level 1&2 in the icpc-zagizag-community and achieving second place in Level 2
- IcpC 2025 Contestant

HONORS AND AWARDS

Cskiled

Machine learning & intro to Deep Learning

- I learned to implement algorithms from scratch and gained deep knowledge in the field. I explored data collection methods and worked on Real projects, including a large-scale project where I write deployment projects. Additionally, the course provided a deep introduction to Deep Learning.

Cskiled

Python programming and OOP program

- I deeply learned programming concepts in Python, significantly enhancing my implementation skills. I worked on problems ranging from easy to medium to hard and developed practical projects from simple to complex and large-scale.

ITI

Computer Vision Summer Internship

- participated in an intensive ITI summer training in Computer Vision, where I gained hands-on experience with Python, OpenCV, and an introduction to Machine Learning.

PROJECTS

Machine Learning Projects

NYC-trip duration project

December - 2025

- it tries to predict the duration for trips in New York by given 10 features and 1Millioon example for train and 200000 for Val
- we end up with best model from xgboost regressor with f1-score: 76% for Val & 72% for test
- use Streamlit for Web Front-end and Fast-Api for Backend Api

Credit Card Fraud Detection

September - 2025

- aims to able to classify the fraud transactions in by given 31 features and 56960 examples but there are 28 features are anonymous.
- the data is highly unbalanced with just 0.172% positive class ration, so we focus on F1-score then recall.
- we reach for the highest f1-score from random forest with [Val_f1score: 89% and Test_f1score: 80%].
